## File Index

### 2.1 File List

Here is a list of all files with brief descriptions:

<a href="#">Almog_Dynamic_Array.h</a>	Header-only C macros that implement a simple dynamic array . . . . .	15
<a href="#">Almog_Lexer.h</a>	A small single-header lexer for C/C++-like source text . . . . .	26
<a href="#">Almog_String_Manipulation.h</a>	Lightweight string and line manipulation helpers . . . . .	48
<a href="#">temp.c</a>		83
<a href="#">tests.c</a>		85

# Chapter 3

## Class Documentation

### 3.1 Lexer Struct Reference

[Lexer](#) state over a caller-provided input buffer.

```
#include <Almog_Lexer.h>
```

#### Public Attributes

- const char \* [content](#)
- size\_t [content\\_len](#)
- size\_t [cursor](#)
- size\_t [line\\_num](#)
- size\_t [begining\\_of\\_line](#)

#### 3.1.1 Detailed Description

[Lexer](#) state over a caller-provided input buffer.

The lexer does not own `content`; the caller must keep it valid for the lifetime of any tokens referencing it.

Internal location tracking:

- `line_num` is 0-based internally (first line is 0).
- `begining_of_line` is the cursor index of the first character of the current line (used for column calculation).

Definition at line [228](#) of file [Almog\\_Lexer.h](#).

#### 3.1.2 Member Data Documentation

### 3.1.2.1 begining\_of\_line

```
size_t Lexer::begining_of_line
```

Definition at line 233 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_lexer\\_chop\\_char\(\)](#), and [test\\_helpers\\_direct\(\)](#).

### 3.1.2.2 content

```
const char* Lexer::content
```

Definition at line 229 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_lexer\\_chop\\_char\(\)](#), [al\\_lexer\\_chop\\_while\(\)](#), [al\\_lexer\\_peek\(\)](#), [al\\_lexer\\_start\\_with\(\)](#), and [al\\_lexer\\_trim\\_left\(\)](#).

### 3.1.2.3 content\_len

```
size_t Lexer::content_len
```

Definition at line 230 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_lexer\\_chop\\_char\(\)](#), [al\\_lexer\\_chop\\_while\(\)](#), [al\\_lexer\\_peek\(\)](#), [al\\_lexer\\_start\\_with\(\)](#), and [al\\_lexer\\_trim\\_left\(\)](#).

### 3.1.2.4 cursor

```
size_t Lexer::cursor
```

Definition at line 231 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_lexer\\_chop\\_char\(\)](#), [al\\_lexer\\_chop\\_while\(\)](#), [al\\_lexer\\_peek\(\)](#), [al\\_lexer\\_start\\_with\(\)](#), [al\\_lexer\\_trim\\_left\(\)](#), and [test\\_helpers\\_direct\(\)](#).

### 3.1.2.5 line\_num

```
size_t Lexer::line_num
```

Definition at line 232 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_lexer\\_chop\\_char\(\)](#), and [test\\_helpers\\_direct\(\)](#).

The documentation for this struct was generated from the following file:

- [Almog\\_Lexer.h](#)

## 3.2 Literal\_Token Struct Reference

Mapping between a literal operator/punctuation text and a token kind.

```
#include <Almog_Lexer.h>
```

### Public Attributes

- enum `Token_Kind` `kind`
- const char \*const `text`

#### 3.2.1 Detailed Description

Mapping between a literal operator/punctuation text and a token kind.

Used internally for longest-match scanning of operators and punctuation.

##### Note

`text` must be a null-terminated string literal.

Definition at line 154 of file [Almog\\_Lexer.h](#).

#### 3.2.2 Member Data Documentation

##### 3.2.2.1 kind

```
enum Token_Kind Literal_Token::kind
```

Definition at line 957 of file [Almog\\_Lexer.h](#).

##### 3.2.2.2 text

```
const char* const Literal_Token::text
```

Definition at line 156 of file [Almog\\_Lexer.h](#).

The documentation for this struct was generated from the following file:

- [Almog\\_Lexer.h](#)

### 3.3 Location Struct Reference

Source location (1-based externally in produced tokens).

```
#include <Almog_Lexer.h>
```

#### Public Attributes

- size\_t `line_num`
- size\_t `col`

#### 3.3.1 Detailed Description

Source location (1-based externally in produced tokens).

`al_lexer_next_token()` stores:

- `line_num`: 1-based line number
- `col`: 1-based column number

Definition at line 167 of file [Almog\\_Lexer.h](#).

#### 3.3.2 Member Data Documentation

##### 3.3.2.1 col

```
size_t Location::col
```

Definition at line 169 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

##### 3.3.2.2 line\_num

```
size_t Location::line_num
```

Definition at line 168 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

The documentation for this struct was generated from the following file:

- [Almog\\_Lexer.h](#)

## 3.4 String Struct Reference

Simple dynamic array of characters (used to hold file content).

```
#include <Almog_Lexer.h>
```

### Public Attributes

- size\_t `length`
- size\_t `capacity`
- char \* `elements`

#### 3.4.1 Detailed Description

Simple dynamic array of characters (used to hold file content).

This struct is compatible with the dynamic array macros from "Almog\_Dynamic\_Array.h".

Definition at line 179 of file [Almog\\_Lexer.h](#).

#### 3.4.2 Member Data Documentation

##### 3.4.2.1 capacity

```
size_t String::capacity
```

Definition at line 181 of file [Almog\\_Lexer.h](#).

##### 3.4.2.2 elements

```
char* String::elements
```

Definition at line 182 of file [Almog\\_Lexer.h](#).

##### 3.4.2.3 length

```
size_t String::length
```

Definition at line 180 of file [Almog\\_Lexer.h](#).

The documentation for this struct was generated from the following file:

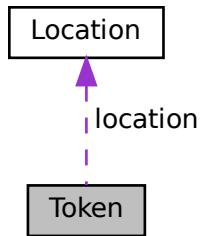

- [Almog\\_Lexer.h](#)

## 3.5 Token Struct Reference

A token produced by the lexer.

```
#include <Almog_Lexer.h>
```

Collaboration diagram for Token:

### Public Attributes

- enum [Token\\_Kind](#) kind
- const char \* [text](#)
- size\_t [text\\_len](#)
- struct [Location](#) [location](#)

#### 3.5.1 Detailed Description

A token produced by the lexer.

[text](#) points into the original input buffer passed to [al\\_lexer\\_alloc](#). The token text is not null-terminated; use [text->text\\_len](#).

Definition at line 191 of file [Almog\\_Lexer.h](#).

#### 3.5.2 Member Data Documentation

##### 3.5.2.1 kind

```
enum Token\_Kind Token::kind
```

Definition at line 182 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_kind\\_name\(\)](#), [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

### 3.5.2.2 location

```
struct Location Token::location
```

Definition at line 194 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

### 3.5.2.3 text

```
const char* Token::text
```

Definition at line 193 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

### 3.5.2.4 text\_len

```
size_t Token::text_len
```

Definition at line 194 of file [Almog\\_Lexer.h](#).

Referenced by [al\\_token\\_print\(\)](#), [expect\\_tok\(\)](#), and [fail\\_token\(\)](#).

The documentation for this struct was generated from the following file:

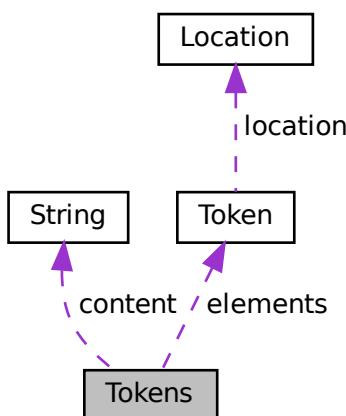

- [Almog\\_Lexer.h](#)

## 3.6 Tokens Struct Reference

Result of lexing an entire file.

```
#include <Almog_Lexer.h>
```

Collaboration diagram for Tokens:

## Public Attributes

- struct `String` `content`
- `size_t` `length`
- `size_t` `capacity`
- struct `Token` \* `elements`

### 3.6.1 Detailed Description

Result of lexing an entire file.

Owns 2 dynamic buffers:

- `content`: the concatenated file contents (with '`\n`' inserted after each line read by `asm_get_line()`).
- `elements`: the token array; each token's `text` points into `content`.

#### Warning

Because tokens reference `content.elements`, `content` must remain alive as long as tokens are used.

Definition at line 210 of file [Almog\\_Lexer.h](#).

### 3.6.2 Member Data Documentation

#### 3.6.2.1 capacity

`size_t Tokens::capacity`

Definition at line 213 of file [Almog\\_Lexer.h](#).

#### 3.6.2.2 content

`struct String Tokens::content`

Definition at line 194 of file [Almog\\_Lexer.h](#).

### 3.6.2.3 elements

```
struct Token* Tokens::elements
```

Definition at line 214 of file [Almog\\_Lexer.h](#).

Referenced by [main\(\)](#).

### 3.6.2.4 length

```
size_t Tokens::length
```

Definition at line 212 of file [Almog\\_Lexer.h](#).

Referenced by [main\(\)](#).

The documentation for this struct was generated from the following file:

- [Almog\\_Lexer.h](#)

# Chapter 4

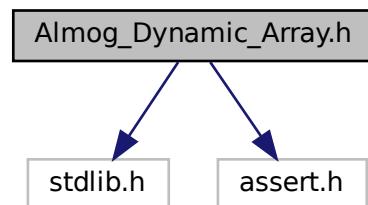

## File Documentation

### 4.1 Almog\_Dynamic\_Array.h File Reference

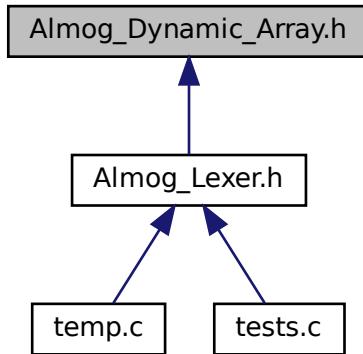

Header-only C macros that implement a simple dynamic array.

```
#include <stdlib.h>
#include <assert.h>
```

Include dependency graph for Almog\_Dynamic\_Array.h:

This graph shows which files directly or indirectly include this file:

## Macros

- `#define ADA_INIT_CAPACITY 10`  
*Default initial capacity used by ada\_init\_array.*
- `#define ADA_MALLOC malloc`  
*Allocation function used by this header (defaults to malloc).*
- `#define ADA_EXIT exit`
- `#define ADA_REALLOC realloc`  
*Reallocation function used by this header (defaults to realloc).*
- `#define ADA_ASSERT assert`  
*Assertion macro used by this header (defaults to assert).*
- `#define ada_init_array(type, header)`  
*Initialize an array header and allocate its initial storage.*
- `#define ada_resize(type, header, new_capacity)`  
*Resize the underlying storage to hold new\_capacity elements.*
- `#define ada_append(type, header, value)`  
*Append a value to the end of the array, growing if necessary.*
- `#define ada_insert(type, header, value, index)`  
*Insert value at position index, preserving order ( $O(n)$ ).*
- `#define ada_insert_unordered(type, header, value, index)`  
*Insert value at index without preserving order ( $O(1)$  amortized).*
- `#define ada_remove(type, header, index)`  
*Remove element at index, preserving order ( $O(n)$ ).*
- `#define ada_remove_unordered(type, header, index)`  
*Remove element at index by moving the last element into its place ( $O(1)$ ); order is not preserved.*

### 4.1.1 Detailed Description

Header-only C macros that implement a simple dynamic array.

This header provides a minimal, macro-based dynamic array for POD-like types. The array "header" is a user-defined struct with three fields:

- `size_t length`; current number of elements
- `size_t capacity`; allocated capacity (in elements)
- `T* elements`; pointer to contiguous storage of elements (type T)

How to use: 1) Define a header struct with length/capacity/elements fields. 2) Initialize it with [ada\\_init\\_array\(T, header\)](#). 3) Modify it with `ada_appand` (append), `ada_insert`, `remove` variants, etc. 4) When done, `free(header.elements)` (or your custom deallocator).

Customization:

- Define `ADA_MALLOC`, `ADA_REALLOC`, and `ADA_ASSERT` before including this header to override allocation and assertion behavior.

Complexity (n = number of elements):

- Append: amortized O(1)
- Ordered insert/remove: O(n)
- Unordered insert/remove: O(1)

Notes and limitations:

- These are macros; arguments may be evaluated multiple times. Pass only simple lvalues (no side effects).
- Index checks rely on `ADA_ASSERT`; with `NDEBUG` they may be compiled out.
- `ada_resize` exits the process (`exit(1)`) if reallocation fails.
- `ada_insert` reads `header.elements[header.length - 1]` internally; inserting into an empty array via `ada_insert` is undefined behavior. Use `ada_appand` or `ada_insert_unordered` for that case.
- No automatic shrinking; you may call `ada_resize` manually.

Example: `typedef struct { size_t length; size_t capacity; int* elements; } ada_int_array;`

```
ada_int_array arr; ada\_init\_array\(int, arr\); ada\_appand\(int, arr, 42\); ada\_insert\(int, arr, 7, 0\); // requires arr.length > 0  
ada\_remove\(int, arr, 1\); free\(arr.elements\);
```

Definition in file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2 Macro Definition Documentation

### 4.1.2.1 ada\_appand

```
#define ada_appand(
    type,
    header,
    value )
```

**Value:**

```
do {
    if (header.length >= header.capacity) {
        ada_resize(type, header, (int)(header.capacity + header.capacity/2 + 1));
    }
    header.elements[header.length] = value;
    header.length++;
} while (0)
```

Append a value to the end of the array, growing if necessary.

#### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>value</i>	Value to append.

#### Postcondition

*header.length* is incremented by 1; the last element equals *value*.

#### Note

Growth factor is  $(\text{int})(\text{header}.capacity * 1.5)$ . Because of truncation, very small capacities may not grow (e.g., from 1 to 1). With the default INIT\_CAPACITY=10 this is typically not an issue unless you manually shrink capacity. Ensure growth always increases capacity by at least 1 if you customize this macro.

Definition at line 176 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.2 ADA\_ASSERT

```
#define ADA_ASSERT assert
```

Assertion macro used by this header (defaults to assert).

Define ADA\_ASSERT before including this file to override. When NDEBUG is defined, standard assert() is disabled.

Definition at line 103 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.3 ADA\_EXIT

```
#define ADA_EXIT exit
```

Definition at line 79 of file [Almog\\_Dynamic\\_Array.h](#).

#### 4.1.2.4 ada\_init\_array

```
#define ada_init_array(
    type,
    header )
```

**Value:**

```
do {                                \
    header.capacity = ADA_INIT_CAPACITY; \
    header.length = 0;                   \
    header.elements = (type *)ADA_MALLOC(sizeof(type) * header.capacity); \
    ADA_ASSERT(header.elements != NULL); \
} while (0)                           \\\
```

Initialize an array header and allocate its initial storage.

**Parameters**

<i>type</i>	Element type stored in the array (e.g., int).
<i>header</i>	Lvalue of the header struct containing fields: length, capacity, and elements.

**Precondition**

header is a modifiable lvalue; header.elements is uninitialized or ignored and will be overwritten.

**Postcondition**

header.length == 0, header.capacity == INIT\_CAPACITY, header.elements != NULL (or ADA\_ASSERT fails).

**Note**

Allocation uses ADA\_MALLOC and is checked via ADA\_ASSERT.

Definition at line 127 of file [Almog\\_Dynamic\\_Array.h](#).

#### 4.1.2.5 ADA\_INIT\_CAPACITY

```
#define ADA_INIT_CAPACITY 10
```

Default initial capacity used by ada\_init\_array.

You may override this by defining ADA\_INIT\_CAPACITY before including this file.

Definition at line 62 of file [Almog\\_Dynamic\\_Array.h](#).

#### 4.1.2.6 ada\_insert

```
#define ada_insert(
    type,
    header,
    value,
    index )
```

**Value:**

```
do {
    ADA_ASSERT((int)(index) >= 0);
    \
    ADA_ASSERT((float)(index) - (int)(index) == 0);
    \
    ada_append(type, header, header.elements[header.length-1]);
    \
    for (int ada_for_loop_index = header.length-2; ada_for_loop_index > (int)(index); ada_for_loop_index--)
    {
        \
        header.elements[ada_for_loop_index] = header.elements [ada_for_loop_index-1];
        \
    }
    \
    header.elements[(index)] = value;
    \
} while (0)
```

Insert value at position index, preserving order ( $O(n)$ ).

#### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>value</i>	Value to insert.
<i>index</i>	Destination index in the range [0, header.length].

#### Precondition

$0 \leq index \leq header.length$ .

$header.length > 0$  if  $index == header.length$  (this macro reads the last element internally). For inserting into an empty array, use `ada_append` or `ada_insert_unordered`.

#### Postcondition

Element is inserted at index; subsequent elements are shifted right; `header.length` is incremented by 1.

#### Note

This macro asserts index is non-negative and an integer value using `ADA_ASSERT`. No explicit upper-bound assert is performed.

Definition at line 203 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.7 ada\_insert\_unordered

```
#define ada_insert_unordered(
    type,
    header,
    value,
    index )
```

**Value:**

```
do { \
    ADA_ASSERT((int)(index) >= 0);
    ADA_ASSERT((float)(index) - (int)(index) == 0);
    if ((size_t)(index) == header.length) {
        ada_appand(type, header, value);
    } else {
        ada_appand(type, header, header.elements[(index)]);
        header.elements[(index)] = value;
    }
} while (0)
```

Insert value at index without preserving order (O(1) amortized).

If index == header.length, this behaves like an append. Otherwise, the current element at index is moved to the end, and value is written at index.

#### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>value</i>	Value to insert.
<i>index</i>	Index in the range [0, header.length].

#### Precondition

$0 \leq \text{index} \leq \text{header.length}$ .

#### Postcondition

`header.length` is incremented by 1; array order is not preserved.

Definition at line 229 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.8 ADA\_MALLOC

```
#define ADA_MALLOC malloc
```

Allocation function used by this header (defaults to malloc).

Define ADA\_MALLOC to a compatible allocator before including this file to override the default.

Definition at line 74 of file [Almog\\_Dynamic\\_Array.h](#).

#### 4.1.2.9 ADA\_REALLOC

```
#define ADA_REALLOC realloc
```

Reallocation function used by this header (defaults to realloc).

Define ADA\_REALLOC to a compatible reallocator before including this file to override the default.

Definition at line 91 of file [Almog\\_Dynamic\\_Array.h](#).

#### 4.1.2.10 ada\_remove

```
#define ada_remove(
    type,
    header,
    index )
```

##### Value:

```
do {
    ADA_ASSERT((int)(index) >= 0);
    \
    ADA_ASSERT((float)(index) - (int)(index) == 0);
    \
    for (size_t ada_for_loop_index = (index); ada_for_loop_index < header.length-1; ada_for_loop_index++) {
        \
        header.elements[ada_for_loop_index] = header.elements[ada_for_loop_index+1];
        \
    }
    \
    header.length--;
} while (0)
```

Remove element at index, preserving order ( $O(n)$ ).

##### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>index</i>	Index in the range [0, header.length - 1].

##### Precondition

$0 \leq index < header.length$ .

##### Postcondition

header.length is decremented by 1; subsequent elements are shifted left by one position. The element beyond the new length is left uninitialized.

Definition at line 253 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.11 ada\_remove\_unordered

```
#define ada_remove_unordered(
    type,
    header,
    index )
```

**Value:**

```
do { \
    ADA_ASSERT((int)(index) >= 0); \
    ADA_ASSERT((float)(index) - (int)(index) == 0); \
    header.elements[index] = header.elements[header.length-1]; \
    header.length--; \
} while (0)
```

Remove element at index by moving the last element into its place ( $O(1)$ ); order is not preserved.

#### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>index</i>	Index in the range [0, header.length - 1].

#### Precondition

$0 \leq \text{index} < \text{header.length}$  and  $\text{header.length} > 0$ .

#### Postcondition

$\text{header.length}$  is decremented by 1; array order is not preserved.

Definition at line 274 of file [Almog\\_Dynamic\\_Array.h](#).

### 4.1.2.12 ada\_resize

```
#define ada_resize(
    type,
    header,
    new_capacity )
```

**Value:**

```
do { \
    type *ada_temp_pointer = (type *)ADA_REALLOC((void *) (header.elements), new_capacity*sizeof(type)); \
    if (ada_temp_pointer == NULL) { \
        ADA_EXIT(1); \
    } \
    header.elements = ada_temp_pointer; \
    ADA_ASSERT(header.elements != NULL); \
    header.capacity = new_capacity; \
} while (0)
```

Resize the underlying storage to hold *new\_capacity* elements.

### Parameters

<i>type</i>	Element type stored in the array.
<i>header</i>	Lvalue of the header struct.
<i>new_capacity</i>	New capacity in number of elements.

### Precondition

*new\_capacity*  $\geq$  *header.length* (otherwise elements beyond *new\_capacity* are lost and *length* will not be adjusted).

### Postcondition

*header.capacity* == *new\_capacity* and *header.elements* points to a block large enough for *new\_capacity* elements.

### Warning

On allocation failure, this macro calls [ADA\\_EXIT\(1\)](#).

### Note

Reallocation uses ADA\_REALLOC and is also checked via ADA\_ASSERT.

Definition at line 150 of file [Almog\\_Dynamic\\_Array.h](#).

*Operator/punctuation token table.*
- `static const char *const keywords []`  
*List of keywords recognized by the lexer.*

### 4.3.1 Detailed Description

A small single-header lexer for C/C++-like source text.

The lexer operates on a caller-provided, read-only character buffer. It produces tokens that reference slices of the original buffer (no allocations and no null-termination guarantees).

#### Note

This header depends on "Almog\_String\_Manipulation.h" for the `asm_*` character classification and string helper routines used by the implementation (e.g. `asm_isalpha`, `asm_isisspace`, etc.).

This single header library is inspired by Tsoding's C-lexer implementation: <https://youtu.be/↔AqyZztK1SGQ>

Definition in file [Almog\\_Lexer.h](#).

### 4.3.2 Macro Definition Documentation

#### 4.3.2.1 AL\_ASSERT

```
#define AL_ASSERT assert
```

Assertion macro used by the lexer (defaults to `assert ()`).

Define `AL_ASSERT` before including this header to override.

Definition at line 30 of file [Almog\\_Lexer.h](#).

### 4.3.2.2 AL\_FREE

```
#define AL_FREE free
```

Deallocation macro used by [al\\_tokens\\_free\(\)](#) (defaults to `free()`).

Define `AL_FREE` before including this header to override.

Definition at line [41](#) of file [Almog\\_Lexer.h](#).

### 4.3.2.3 AL\_UNUSED

```
#define AL_UNUSED (x) (void)x
```

Mark a variable as intentionally unused.

#### Parameters

x	Expression evaluated for side effects (if any) and then cast to void to suppress unused warnings.
---	---

Definition at line [328](#) of file [Almog\\_Lexer.h](#).

### 4.3.2.4 ASM\_NO\_ERRORS

```
#define ASM_NO_ERRORS
```

Definition at line [350](#) of file [Almog\\_Lexer.h](#).

### 4.3.2.5 keywords\_count

```
#define keywords_count (sizeof(keywords) / sizeof(keywords[0]))
```

Definition at line [319](#) of file [Almog\\_Lexer.h](#).

### 4.3.2.6 literal\_tokens\_count

```
#define literal_tokens_count (sizeof(literal_tokens) / sizeof(literal_tokens[0]))
```

Definition at line [296](#) of file [Almog\\_Lexer.h](#).

### 4.3.3 Enumeration Type Documentation

#### 4.3.3.1 Token\_Kind

enum `Token_Kind`

`Token` categories produced by the lexer.

The lexer attempts to classify source text into:

- high-level "word-like" tokens (identifiers, keywords, literals, comments)
- punctuation / operators (matched using the longest-match rule)
- TOKEN\_INVALID for unrecognized or malformed sequences
- TOKEN\_EOF at end of input

##### Enumerator

#### 4.3.4 Function Documentation

##### 4.3.4.1 al\_is\_identifier()

```
bool al_is_identifier (
    char c )
```

Returns whether `c` can appear in an identifier after the first character.

Matches the implementation: alphanumeric (per `asm_isalnum`) or underscore.

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is valid as a non-initial identifier character.

Definition at line 361 of file [Almog\\_Lexer.h](#).

References [asm\\_isalnum\(\)](#).

Referenced by [test\\_helpers\\_direct\(\)](#).

#### 4.3.4.2 al\_is\_identifier\_start()

```
bool al_is_identifier_start (
    char c )
```

Returns whether `c` can start an identifier.

Matches the implementation: alphabetic (per `asm_isalpha()`) or underscore.

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is valid as an initial identifier character.

Definition at line 374 of file [Almog\\_Lexer.h](#).

References [asm\\_isalpha\(\)](#).

Referenced by [test\\_helpers\\_direct\(\)](#).

#### 4.3.4.3 al\_lex\_entire\_file()

```
struct Tokens al_lex_entire_file (
    FILE * fp )
```

Definition at line 374 of file [Almog\\_Lexer.h](#).

Referenced by [main\(\)](#).

#### 4.3.4.4 al\_lexer\_alloc()

```
struct Lexer al_lexer_alloc (
    const char * content,
    size_t len )
```

Create a lexer over an input buffer.

Initializes cursor and location state to the beginning of the buffer. No memory is allocated; the lexer holds only pointers/indices.

##### Parameters

<i>content</i>	Pointer to the input text (need not be null-terminated).
<i>len</i>	Length of <i>content</i> in bytes.

##### Returns

A lexer initialized to the start of *content*.

Definition at line 374 of file [Almog\\_Lexer.h](#).

Referenced by [test\\_basic\\_program\(\)](#), [test\\_comments\(\)](#), [test\\_hash\\_not\\_pp\\_directive\\_when\\_not\\_column1\(\)](#), [test\\_helpers\\_direct\(\)](#), [test\\_hex\\_float\\_variants\(\)](#), [test\\_invalid\\_single\\_char\(\)](#), [test\\_keyword\\_vs\\_identifier\\_prefix\(\)](#), [test\\_literal\\_operators\\_longest\\_match\(\)](#), [test\\_number\\_stops\\_on\\_invalid\\_digit\\_in\\_base\(\)](#), [test\\_numbers\\_valid\\_and\\_invalid\(\)](#), [test\\_pp\\_directive\\_and\\_locations\(\)](#), [test\\_string\\_and\\_char\\_literals\(\)](#), [test\\_unterminated\\_block\\_comment\(\)](#), and [test\\_whitespace\\_location\\_math\(\)](#).

#### 4.3.4.5 al\_lexer\_chop\_char()

```
char al_lexer_chop_char (
    struct Lexer * l )
```

Consume and return the next character from the input.

Advances the lexer's cursor by 1. If the consumed character is a newline ('\n'), the lexer's internal line/column bookkeeping is updated: `-line_num` is incremented and `-begining_of_line`` is set to the new cursor position

##### Parameters

<i>l</i>	<a href="#">Lexer</a> to advance.
----------	-----------------------------------

##### Returns

The consumed character.

### Precondition

`l->cursor < l->content_len` (enforced via `AL_ASSERT` in the implementation).

Definition at line 436 of file [Almog\\_Lexer.h](#).

References `AL_ASSERT`, `Lexer::begining_of_line`, `Lexer::content`, `Lexer::content_len`, `Lexer::cursor`, and `Lexer::line_num`.

Referenced by `al_lexer_chop_while()`, `al_lexer_trim_left()`, and `test_helpers_direct()`.

### 4.3.4.6 `al_lexer_chop_while()`

```
void al_lexer_chop_while (
    struct Lexer * l,
    bool(*)(char) pred )
```

Consume characters while `pred` returns true for the next character.

Uses `al_lexer_chop_char` internally, so newline bookkeeping is applied.

#### Parameters

<code>l</code>	<code>Lexer</code> to advance.
<code>pred</code>	Predicate called with the next character to decide whether to consume it.

Definition at line 456 of file [Almog\\_Lexer.h](#).

References `al_lexer_chop_char()`, `Lexer::content`, `Lexer::content_len`, and `Lexer::cursor`.

Referenced by `test_helpers_direct()`.

### 4.3.4.7 `al_lexer_next_token()`

```
struct Token al_lexer_next_token (
    struct Lexer * l )
```

Return the next token from the input and advance the lexer.

This function first calls `al_lexer_trim_left`, so leading whitespace is skipped (including newlines).

The returned token:

- has `text` pointing into the original buffer at the token start
- has `text_len` equal to the number of bytes consumed for the token
- has 1-based `location.line_num` and 1-based `location.col`

Tokenization behavior matches the implementation:

- End of input => TOKEN\_EOF
- Preprocessor directive: a # at column 1 (after trimming) consumes until newline (and includes the newline if present) => TOKEN\_PP\_DIRECTIVE
- Identifiers: [A-Za-z\_] [A-Za-z0-9\_] \* => TOKEN\_IDENTIFIER, upgraded to TOKEN\_KEYWORD if it matches an entry in keywords []
- String literal: starts with "</tt>" and consumes until the next <tt>" or newline (includes the closing " if present) => TOKEN\_STRING\_LIT
- Character literal: starts with " and consumes until the next ' or newline (includes the closing ' if present) => @c TOKEN\_CHAR\_LIT
- Line comment: starts with // and consumes until newline (and includes the newline if present) => TOKEN\_COMMENT
- Block comment: starts with /\* and consumes until the first \*/ (includes the final /), or until end of input => TOKEN\_COMMENT
- Number literals:
  - decimal integers/floating-point numbers with optional exponent (e/E)
  - hex integers and hex floating-point numbers (hex float requires p/P exponent when a fractional part is present)
  - binary integers with 0b/0B
  - explicit octal integers with 0o/0O
  - accepts common integer suffixes (uUlLzzZ) and float suffixes (fF11L)
  - certain malformed forms are returned as TOKEN\_INVALID
- Otherwise: matches the longest operator/punctuation from literal\_tokens [] (longest-match rule) and returns its kind
- If nothing matches, consumes one character and returns TOKEN\_INVALID

#### Warning

Escape sequences in string/character literals are not interpreted; a quote character ends the literal even if preceded by a backslash.

#### Parameters

/	Lexer to tokenize from.
---	-------------------------

#### Returns

The next token.

Definition at line 456 of file [Almog\\_Lexer.h](#).

Referenced by [expect\\_tok\(\)](#).

#### 4.3.4.8 al\_lexer\_peek()

```
char al_lexer_peek (
    const struct Lexer * l,
    size_t off )
```

Peek at a character in the input without advancing the lexer.

##### Parameters

<i>l</i>	<a href="#">Lexer</a> to read from.
<i>off</i>	Offset from the current cursor (0 means current character).

##### Returns

The character at `cursor + off`, or "\0" if out of range.

Definition at line 783 of file [Almog\\_Lexer.h](#).

References [Lexer::content](#), [Lexer::content\\_len](#), and [Lexer::cursor](#).

Referenced by [test\\_helpers\\_direct\(\)](#).

#### 4.3.4.9 al\_lexer\_start\_with()

```
bool al_lexer_start_with (
    struct Lexer * l,
    const char * prefix )
```

Check whether the remaining input at the current cursor starts with `prefix`.

##### Parameters

<i>l</i>	<a href="#">Lexer</a> whose input is tested.
<i>prefix</i>	Null-terminated prefix string to match.

##### Returns

true if `prefix` is empty or fully matches at the current cursor; false otherwise.

Definition at line 741 of file [Almog\\_Lexer.h](#).

References [asm\\_length\(\)](#), [Lexer::content](#), [Lexer::content\\_len](#), and [Lexer::cursor](#).

Referenced by [test\\_helpers\\_direct\(\)](#).

#### 4.3.4.10 al\_lexer\_trim\_left()

```
void al_lexer_trim_left (
    struct Lexer * l )
```

Consume leading whitespace characters.

Whitespace is defined by `asm_isisspace` from "Almog\_String\_Manipulation.h". Uses `al_lexer_chop_char`, so new-lines update line/column bookkeeping.

##### Parameters

<i>l</i>	Lexer to advance.
----------	-------------------

Definition at line 766 of file [Almog\\_Lexer.h](#).

References `al_lexer_chop_char()`, `asm_isisspace()`, `Lexer::content`, `Lexer::content_len`, and `Lexer::cursor`.

#### 4.3.4.11 al\_token\_kind\_name()

```
const char * al_token_kind_name (
    enum Token_Kind kind )
```

Convert a token kind enum to a stable string name.

The returned pointer refers to a string literal.

##### Parameters

<i>kind</i>	Token kind.
-------------	-------------

##### Returns

A string name such as "TOKEN\_IDENTIFIER", or asserts on unknown kinds in the implementation's default case.

Definition at line 815 of file [Almog\\_Lexer.h](#).

References `AL_ASSERT`, `Token::kind`, `TOKEN_ANDAND`, `TOKEN_ANDEQ`, `TOKEN_ARROW`, `TOKEN_BANG`, `TOKEN_BITAND`, `TOKEN_BITOR`, `TOKEN_BSLSH`, `TOKEN_CARET`, `TOKEN_CHAR_LIT`, `TOKEN_COLON`, `TOKEN_COMMA`, `TOKEN_COMMENT`, `TOKEN_DOT`, `TOKEN_ELLIPSIS`, `TOKEN_EOF`, `TOKEN_EQ`, `TOKEN_EQEQ`, `TOKEN_FLOAT_LIT_DEC`, `TOKEN_FLOAT_LIT_HEX`, `TOKEN_GE`, `TOKEN_GT`, `TOKEN_HASH`, `TOKEN_IDENTIFIER`, `TOKEN_INT_LIT_BIN`, `TOKEN_INT_LIT_DEC`, `TOKEN_INT_LIT_HEX`, `TOKEN_INT_LIT_OCT`, `TOKEN_INVALID`, `TOKEN_KEYWORD`, `TOKEN_LBRACE`, `TOKEN_LBRACKET`, `TOKEN_LE`, `TOKEN_LPAREN`, `TOKEN_LSHIFT`, `TOKEN_LSHIFTEQ`, `TOKEN_LT`, `TOKEN_MINUS`, `TOKEN_MINUSEQ`, `TOKEN_MINUSMINUS`, `TOKEN_NE`, `TOKEN_OREQ`, `TOKEN_OROR`, `TOKEN_PERCENT`, `TOKEN_PERCENTEQ`, `TOKEN_PLUS`, `TOKEN_PLUSEQ`, `TOKEN_PLUSPLUS`, `TOKEN_PP_DIRECTIVE`, `TOKEN_QUESTION`, `TOKEN_RBRACE`, `TOKEN_RBRACKET`, `TOKEN_RPAREN`, `TOKEN_RSHIFT`, `TOKEN_RSHIFTEQ`, `TOKEN_SEMICOLON`, `TOKEN_SLASH`, `TOKEN_SLASHEQ`, `TOKEN_STAR`, `TOKEN_STAREQ`, `TOKEN_STRING_LIT`, `TOKEN_TILDE`, and `TOKEN_XOREQ`.

Referenced by `al_token_print()`.

#### 4.3.4.12 al\_token\_print()

```
void al_token_print (
    struct Token tok )
```

Print a human-readable representation of `tok` to stdout.

Output format matches the implementation: `line:col:(KIND) -> "TEXT"`

##### Note

The token text is printed using a precision specifier (`%.*s`) and does not need to be null-terminated.

##### Parameters

<code>tok</code>	Token to print.
------------------	-----------------

Definition at line [801](#) of file [Almog\\_Lexer.h](#).

References `al_token_kind_name()`, `Location::col`, `Token::kind`, `Location::line_num`, `Token::location`, `Token::text`, and `Token::text_len`.

Referenced by [main\(\)](#).

#### 4.3.4.13 al\_tokens\_free()

```
void al_tokens_free (
    struct Tokens tokens )
```

Definition at line [957](#) of file [Almog\\_Lexer.h](#).

Referenced by [main\(\)](#).

#### 4.3.4.14 al\_tokens\_init()

```
struct Tokens al_tokens_init (
    void )
```

Definition at line [815](#) of file [Almog\\_Lexer.h](#).

### 4.3.5 Variable Documentation

### 4.3.5.1 keywords

```
const char* const keywords[] [static]
```

#### Initial value:

```
= {
    "auto", "break", "case", "char", "const", "continue", "default", "do", "double",
    "else", "enum", "extern", "float", "for", "goto", "if", "int", "long", "register",
    "return", "short", "signed", "sizeof", "static", "struct", "switch", "typedef",
    "union", "unsigned", "void", "volatile", "while", "alignas", "alignof", "and",
    "and_eq", "asm", "atomic_cancel", "atomic_commit", "atomic_noexcept", "bitand",
    "bitor", "bool", "catch", "char16_t", "char32_t", "char8_t", "class", "co_await",
    "co_return", "co_yield", "compl", "concept", "const_cast", "constexpr", "consteval",
    "constinit", "decltype", "delete", "dynamic_cast", "explicit", "export", "false",
    "friend", "inline", "mutable", "namespace", "new", "noexcept", "not", "not_eq",
    "nullptr", "operator", "or", "or_eq", "private", "protected", "public", "reflexpr",
    "reinterpret_cast", "requires", "static_assert", "static_cast", "synchronized",
    "template", "this", "thread_local", "throw", "true", "try", "typeid", "typename",
    "using", "virtual", "wchar_t", "xor", "xor_eq",
}
```

List of keywords recognized by the lexer.

If an identifier's spelling matches one of these strings exactly, the lexer produces TOKEN\_KEYWORD instead of TOKEN\_IDENTIFIER.

Definition at line 304 of file [Almog\\_Lexer.h](#).

### 4.3.5.2 literal\_tokens

```
struct Literal_Token literal_tokens[] [static]
```

Operator/punctuation token table.

The lexer uses this table to apply a longest-match rule for multi-character operators (e.g. ">>=" over ">>" and ">").

#### Note

This table is defined in the header as static, so each translation unit gets its own copy.

Definition at line 1 of file [Almog\\_Lexer.h](#).

*Append up to *N* characters from *s2* to the end of *s1*.*
- `int asm_strncmp (const char *s1, const char *s2, const size_t N)`  
*Compare up to *N* characters for equality (boolean result).*
- `int asm_strncpy (char *const s1, const char *const s2, const size_t N)`  
*Copy up to *N* characters from *s2* into *s1* (non-standard).*
- `void asm_tolower (char *const s)`  
*Convert all ASCII letters in a string to lowercase in-place.*
- `void asm_toupper (char *const s)`  
*Convert all ASCII letters in a string to uppercase in-place.*
- `void asm_trim_left_whitespace (char *const s)`  
*Remove leading ASCII whitespace from a string in-place.*

### 4.5.1 Detailed Description

Lightweight string and line manipulation helpers.

This single-header module provides small utilities for working with C strings:

- Reading a single line from a FILE stream
- Measuring string length
- Extracting the next token from a string using a delimiter (does not skip whitespace)
- Cutting the extracted token (and leading whitespace) from the source buffer
- Copying a substring by indices
- Counting occurrences of a substring
- A boolean-style strncmp (returns 1 on equality, 0 otherwise)
- ASCII-only character classification helpers (isalnum, isalpha, ...)
- ASCII case conversion (toupper / tolower)
- In-place whitespace stripping and left padding
- Base-N string-to-number conversion for int, size\_t, float, and double

#### Usage

- In exactly one translation unit, define ALMOG\_STRING\_MANIPULATION\_IMPLEMENTATION before including this header to compile the implementation.
- In all other files, include the header without the macro to get declarations only.

#### Notes and limitations

- All destination buffers must be large enough; functions do not grow or allocate buffers.
- asm\_get\_line and asm\_length enforce ASM\_MAX\_LEN characters (not counting the terminating '\0'). Longer lines cause an early return with an error message.
- asm\_strncmp differs from the standard C strncmp: this version returns 1 if equal and 0 otherwise.
- Character classification and case-conversion helpers are ASCII-only and not locale aware.

### 4.5.2 Macro Definition Documentation

#### 4.5.2.1 asm\_dprintCHAR

```
#define asm_dprintCHAR(  
    expr ) printf(#expr " = %c\n", expr)
```

Debug-print a character expression as "expr = c\n".

**Parameters**

<i>expr</i>	An expression that yields a character (or an int promoted from a character). The expression is evaluated exactly once.
-------------	--

Definition at line 83 of file [Almog\\_String\\_Manipulation.h](#).

**4.5.2.2 asm\_dprintDOUBLE**

```
#define asm_dprintDOUBLE(
    expr ) printf(#expr " = %#g\n", expr)
```

Debug-print a double expression as "expr = n\n".

**Parameters**

<i>expr</i>	An expression that yields a double. The expression is evaluated exactly once.
-------------	---

Definition at line 110 of file [Almog\\_String\\_Manipulation.h](#).

**4.5.2.3 asm\_dprintERROR**

```
#define asm_dprintERROR(
    fmt,
    ... )
```

**Value:**

```
fprintf(stderr, "\n%s:%d:\n[Error] in function '%s':\n      " \
        fmt "\n\n", __FILE__, __LINE__, __func__, __VA_ARGS__)
```

Definition at line 121 of file [Almog\\_String\\_Manipulation.h](#).

**4.5.2.4 asm\_dprintFLOAT**

```
#define asm_dprintFLOAT(
    expr ) printf(#expr " = %#g\n", expr)
```

Debug-print a float expression as "expr = n\n".

**Parameters**

<i>expr</i>	An expression that yields a float. The expression is evaluated exactly once.
-------------	--

Definition at line 101 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.5 `asm_dprintINT`

```
#define asm_dprintINT(  
    expr ) printf(#expr " = %d\n", expr)
```

Debug-print an integer expression as "expr = n\n".

##### Parameters

<code>expr</code>	An expression that yields an int. The expression is evaluated exactly once.
-------------------	---

Definition at line 92 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.6 `asm_dprintSIZE_T`

```
#define asm_dprintSIZE_T(  
    expr ) printf(#expr " = %zu\n", expr)
```

Debug-print a `size_t` expression as "expr = n\n".

##### Parameters

<code>expr</code>	An expression that yields a <code>size_t</code> . The expression is evaluated exactly once.
-------------------	---

Definition at line 119 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.7 `asm_dprintSTRING`

```
#define asm_dprintSTRING(  
    expr ) printf(#expr " = %s\n", expr)
```

Debug-print a C string expression as "expr = value\n".

##### Parameters

<code>expr</code>	An expression that yields a pointer to char (const or non-const). The expression is evaluated exactly once.
-------------------	---

Definition at line 74 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.8 asm\_max

```
#define asm_max(
    a,
    b ) ((a) > (b) ? (a) : (b))
```

Return the larger of two values (macro).

##### Parameters

<i>a</i>	First value.
<i>b</i>	Second value.

##### Returns

The larger of *a* and *b*.

##### Note

Each parameter may be evaluated more than once. Do not pass expressions with side effects (e.g., `++i`, function calls with state).

Definition at line 149 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.9 ASM\_MAX\_LEN

```
#define ASM_MAX_LEN (int)1e3
```

Maximum number of characters processed in some string operations.

This constant limits:

- The number of characters read by `asm_get_line` from a stream (excluding the terminating null byte).
- The maximum number of characters inspected by `asm_length`.

If `asm_get_line` reads `ASM_MAX_LEN` characters without encountering '`'` or EOF, it prints an error to `stderr` and returns -1. In that error case, the buffer is truncated and null-terminated by overwriting the last stored character (so the resulting string length is `ASM_MAX_LEN - 1`).

Definition at line 64 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.2.10 asm\_min

```
#define asm_min(
    a,
    b ) ((a) < (b) ? (a) : (b))
```

Return the smaller of two values (macro).

**Parameters**

<i>a</i>	First value.
<i>b</i>	Second value.

**Returns**

The smaller of *a* and *b*.

**Note**

Each parameter may be evaluated more than once. Do not pass expressions with side effects (e.g., `++i`, function calls with state).

Definition at line 136 of file [Almog\\_String\\_Manipulation.h](#).

### 4.5.3 Function Documentation

#### 4.5.3.1 `asm_check_char_belong_to_base()`

```
bool asm_check_char_belong_to_base (
    const char c,
    const size_t base )
```

Check if a character is a valid digit in a given base.

**Parameters**

<i>c</i>	Character to test (e.g., '0'-'9', 'a'-'z', 'A'-'Z').
<i>base</i>	Numeric base in the range [2, 36].

**Returns**

true if *c* is a valid digit for *base*, false otherwise.

**Note**

If *base* is outside [2, 36], an error is printed to stderr and false is returned.

Definition at line 206 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), and [asm\\_isdigit\(\)](#).

Referenced by [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), [asm\\_str2double\(\)](#), [asm\\_str2float\(\)](#), [asm\\_str2int\(\)](#), and [asm\\_str2size\\_t\(\)](#).

#### 4.5.3.2 `asm_copy_array_by_indexes()`

```
void asm_copy_array_by_indexes (
    char *const target,
    const int start,
    const int end,
    const char *const src )
```

Copy a substring from `src` into `target` by indices and null-terminate.

Copies characters with indices  $i = \text{start}, \text{start} + 1, \dots, \text{end}$  from `src` into `target` (note: `end` is inclusive in this implementation), then ensures `target` is null-terminated.

##### Parameters

<code>target</code>	Destination buffer. Must be large enough to hold $(\text{end} - \text{start} + 1)$ characters plus the null terminator.
<code>start</code>	Inclusive start index within <code>src</code> (0-based).
<code>end</code>	Inclusive end index within <code>src</code> (must satisfy <code>end &gt;= start</code> ).
<code>src</code>	Source string buffer.

##### Warning

No bounds checking is performed. The caller must ensure valid indices and sufficient target capacity.

Definition at line 241 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.3 `asm_get_char_value_in_base()`

```
int asm_get_char_value_in_base (
    const char c,
    const size_t base )
```

Convert a digit character to its numeric value in base-N.

##### Parameters

<code>c</code>	Digit character ('0'-'9', 'a'-'z', 'A'-'Z').
<code>base</code>	Numeric base in the range [2, 36] (used for validation).

##### Returns

The numeric value of `c` in the range [0, 35].

##### Note

This function assumes `c` is a valid digit character. Call [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#) first if validation is needed.

Definition at line 264 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#), [asm\\_isdigit\(\)](#), and [asm\\_isupper\(\)](#).

Referenced by [asm\\_str2double\(\)](#), [asm\\_str2float\(\)](#), [asm\\_str2int\(\)](#), and [asm\\_str2size\\_t\(\)](#).

#### 4.5.3.4 `asm_get_line()`

```
int asm_get_line (
    FILE * fp,
    char *const dst )
```

Read a single line from a stream into a buffer.

Reads characters from the FILE stream until a newline ('  
') or EOF is encountered. The newline, if present, is not copied. The result is always null-terminated on normal (non-error) completion.

##### Parameters

<code>fp</code>	Input stream (must be non-NULL).
<code>dst</code>	Destination buffer. Must have capacity of at least ASM_MAX_LEN + 1 bytes.

##### Returns

Number of characters stored in `dst` (excluding the terminating null byte).

##### Return values

-1	EOF was encountered before any character was read, or the line exceeded ASM_MAX_LEN characters (error).
----	---

##### Note

If the line reaches ASM\_MAX\_LEN characters before a newline or EOF is seen, the function prints an error message to stderr and returns -1. In that case, `dst` is truncated and null-terminated by overwriting the last stored character.

An empty line (just '  
) returns 0 (not -1).

Definition at line 297 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), and [ASM\\_MAX\\_LEN](#).

#### 4.5.3.5 `asm_get_next_token_from_str()`

```
int asm_get_next_token_from_str (
    char *const dst,
    const char *const src,
    const char delimiter )
```

Copy characters from the start of a string into a token buffer.

Copies characters from `src` into `dst` until one of the following is encountered in `src`:

- the delimiter character,
- or the string terminator ('\0').

The delimiter (if present) is not copied into `dst`. The resulting token in `dst` is always null-terminated.

##### Parameters

<code>dst</code>	Destination buffer for the extracted token. Must be large enough to hold the token plus the null terminator.
<code>src</code>	Source C string to parse (not modified by this function).
<code>delimiter</code>	Delimiter character to stop at.

##### Returns

The number of characters copied into `dst` (excluding the null terminator). This is also the index in `src` of the delimiter or '\0' that stopped the copy.

##### Note

This function does not skip leading whitespace and does not treat newline ('\n') specially; newlines are copied like any other character.

If `src` starts with `delimiter` or '\0', an empty token is produced (`dst` becomes ""), and 0 is returned.

Definition at line 344 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_get\\_token\\_and\\_cut\(\)](#).

#### 4.5.3.6 `asm_get_token_and_cut()`

```
int asm_get_token_and_cut (
    char *const dst,
    char * src,
    const char delimiter,
    const bool leave_delimiter )
```

Extract the next token into `dst` and remove the corresponding prefix from `src`.

Calls `asm_get_next_token_from_str(dst, src, delimiter)` to extract a token from the beginning of `src` into `dst`. Then modifies `src` in-place by left-shifting it.

If `leave_delimiter` is true, `src` is left-shifted by the value returned from `asm_get_next_token_from_str()` (i.e., the delimiter—if present—remains as the first character in the updated `src`).

If `leave_delimiter` is false, `src` is left-shifted by that return value plus one (intended to also remove the delimiter).

## Parameters

<i>dst</i>	Destination buffer for the extracted token (must be large enough for the token plus the null terminator).
<i>src</i>	Source buffer, modified in-place by this function.
<i>delimiter</i>	Delimiter character used to stop token extraction.
<i>leave_delimiter</i>	If true, do not remove the delimiter from <i>src</i> ; if false, remove one additional character after the token.

## Returns

1 if [asm\\_get\\_next\\_token\\_from\\_str\(\)](#) returned a non-zero value, otherwise 0.

## Note

This function always calls [asm\\_shift\\_left\(\)](#) even when the returned value from [asm\\_get\\_next\\_token\\_from\\_str\(\)](#) is 0. In particular, when *leave\_delimiter* is false and the returned value is 0, *src* will be left-shifted by 1.

Definition at line 387 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_get\\_next\\_token\\_from\\_str\(\)](#), and [asm\\_shift\\_left\(\)](#).

**4.5.3.7 asm\_isalnum()**

```
bool asm_isalnum (
    char c )
```

Test for an alphanumeric character (ASCII).

## Parameters

<i>c</i>	Character to test.
----------	--------------------

## Returns

true if *c* is '0'-'9', 'A'-'Z', or 'a'-'z'; false otherwise.

Definition at line 408 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isalpha\(\)](#), and [asm\\_isdigit\(\)](#).

Referenced by [al\\_is\\_identifier\(\)](#).

**4.5.3.8 asm\_isalpha()**

```
bool asm_isalpha (
    char c )
```

Test for an alphabetic character (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is 'A'–'Z' or 'a'–'z'; false otherwise.

Definition at line 419 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_islower\(\)](#), and [asm\\_isupper\(\)](#).

Referenced by [al\\_is\\_identifier\\_start\(\)](#), [asm\\_isalnum\(\)](#), and [test\\_helpers\\_direct\(\)](#).

#### 4.5.3.9 `asm_isbdigit()`

```
bool asm_isbdigit (
    const char c )
```

Test for a binary digit (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is '0' or '1'; false otherwise.

Definition at line 430 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.10 `asm_iscntrl()`

```
bool asm_iscntrl (
    char c )
```

Test for a control character (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if c is in the range [0, 31] or 127; false otherwise.

Definition at line 445 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.11 **asm\_isdigit()**

```
bool asm_isdigit (
    char c )
```

Test for a decimal digit (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if c is '0'-'9'; false otherwise.

Definition at line 460 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#), [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), [asm\\_isalnum\(\)](#), [asm\\_isxdigit\(\)](#), and [asm\\_isXdigit\(\)](#).

#### 4.5.3.12 **asm\_isgraph()**

```
bool asm_isgraph (
    char c )
```

Test for any printable character except space (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if c is in the range [33, 126]; false otherwise.

Definition at line 475 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_isprint\(\)](#).

#### 4.5.3.13 `asm_islower()`

```
bool asm_islower (
    char c )
```

Test for a lowercase letter (ASCII).

##### Parameters

<code>c</code>	Character to test.
----------------	--------------------

##### Returns

true if `c` is 'a'-'z'; false otherwise.

Definition at line 490 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_isalpha\(\)](#), and [asm\\_toupper\(\)](#).

#### 4.5.3.14 `asm_isodigit()`

```
bool asm_isodigit (
    const char c )
```

Test for an octal digit (ASCII).

##### Parameters

<code>c</code>	Character to test.
----------------	--------------------

##### Returns

true if `c` is '0'-'7'; false otherwise.

Definition at line 505 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.15 `asm_isprint()`

```
bool asm_isprint (
    char c )
```

Test for any printable character including space (ASCII).

##### Parameters

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is space (' ') or `asm_isgraph(c)` is true; false otherwise.

Definition at line 521 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isgraph\(\)](#).

#### 4.5.3.16 `asm_ispunct()`

```
bool asm_ispunct (
    char c )
```

Test for a punctuation character (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is a printable, non-alphanumeric, non-space character; false otherwise.

Definition at line 533 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.17 `asm_isspace()`

```
bool asm_isspace (
    char c )
```

Test for a whitespace character (ASCII).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is one of ' ', '  
'\t', '\v', '\f', or '\r'; false otherwise.

Definition at line 549 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by `al_lexer_trim_left()`, `asm_str2double()`, `asm_str2float()`, `asm_str2int()`, `asm_str2size_t()`, `asm_str_is whitespace()`, `asm_strip_whitespace()`, and `asm_trim_left whitespace()`.

#### 4.5.3.18 `asm_isupper()`

```
bool asm_isupper (
    char c )
```

Test for an uppercase letter (ASCII).

##### Parameters

<code>c</code>	Character to test.
----------------	--------------------

##### Returns

true if `c` is 'A'–'Z'; false otherwise.

Definition at line 565 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), [asm\\_isalpha\(\)](#), and [asm\\_tolower\(\)](#).

#### 4.5.3.19 `asm_isxdigit()`

```
bool asm_isxdigit (
    char c )
```

Test for a hexadecimal digit (lowercase or decimal).

##### Parameters

<code>c</code>	Character to test.
----------------	--------------------

##### Returns

true if `c` is '0'–'9' or 'a'–'f'; false otherwise.

Definition at line 580 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isdigit\(\)](#).

#### 4.5.3.20 `asm_isXdigit()`

```
bool asm_isXdigit (
    char c )
```

Test for a hexadecimal digit (uppercase or decimal).

**Parameters**

<code>c</code>	Character to test.
----------------	--------------------

**Returns**

true if `c` is '0'–'9' or 'A'–'F'; false otherwise.

Definition at line 595 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isdigit\(\)](#).

**4.5.3.21 asm\_length()**

```
size_t asm_length (
    const char *const str )
```

Compute the length of a null-terminated C string.

**Parameters**

<code>str</code>	Null-terminated string (must be non-NULL).
------------------	--

**Returns**

The number of characters before the terminating null byte.

**Note**

If more than `ASM_MAX_LEN` characters are scanned without encountering a null terminator, an error is printed to `stderr` and `SIZE_MAX` is returned.

Definition at line 614 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), and [ASM\\_MAX\\_LEN](#).

Referenced by [al\\_lexer\\_start\\_with\(\)](#), [asm\\_pad\\_left\(\)](#), [asm\\_remove\\_char\\_from\\_string\(\)](#), [asm\\_shift\\_left\(\)](#), [asm\\_str\\_in\\_str\(\)](#), [asm\\_str\\_is\\_whitespace\(\)](#), [asm\\_strip\\_whitespace\(\)](#), [asm\\_strncat\(\)](#), [asm\\_strncpy\(\)](#), [asm\\_tolower\(\)](#), [asm\\_toupper\(\)](#), and [asm\\_trim\\_left\\_whitespace\(\)](#).

**4.5.3.22 asm\_memset()**

```
void * asm_memset (
    void *const des,
    const unsigned char value,
    const size_t n )
```

Set a block of memory to a repeated byte value.

Writes `value` into each of the first `n` bytes of the memory region pointed to by `des`. This function mirrors the behavior of the standard C `memset()`, but implements it using a simple byte-wise loop.

**Parameters**

<i>des</i>	Destination memory block to modify. Must point to a valid buffer of at least <i>n</i> bytes.
<i>value</i>	Unsigned byte value to store repeatedly.
<i>n</i>	Number of bytes to set.

**Returns**

The original pointer *des*.

**Note**

This implementation performs no optimizations (such as word-sized writes); the memory block is filled one byte at a time.

Behavior is undefined if *des* overlaps with invalid or non-writable memory.

Definition at line 649 of file [Almog\\_String\\_Manipulation.h](#).

**4.5.3.23 `asm_pad_left()`**

```
void asm_pad_left (
    char *const s,
    const size_t padding,
    const char pad )
```

Left-pad a string in-place.

Shifts the contents of *s* to the right by *padding* positions and fills the vacated leading positions with *pad*.

**Parameters**

<i>s</i>	<a href="#">String</a> to pad. Modified in-place.
<i>padding</i>	Number of leading spaces to insert.
<i>pad</i>	The padding character to insert.

**Warning**

The buffer backing *s* must have enough capacity for the original string length plus *padding* and the terminating null byte. No bounds checking is performed.

Definition at line 672 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_length\(\)](#).

#### 4.5.3.24 `asm_print_many_times()`

```
void asm_print_many_times (
    const char *const str,
    const size_t n )
```

Print a string `n` times, then print a newline.

##### Parameters

<code>str</code>	String to print (as-is with <code>printf("%s", ...)</code> ).
<code>n</code>	Number of times to print <code>str</code> .

Definition at line 689 of file [Almog\\_String\\_Manipulation.h](#).

#### 4.5.3.25 `asm_remove_char_from_string()`

```
void asm_remove_char_from_string (
    char *const s,
    const size_t index )
```

Remove a single character from a string by index.

Deletes the character at position `index` from `s` by shifting subsequent characters one position to the left.

##### Parameters

<code>s</code>	String to modify in-place. Must be null-terminated.
<code>index</code>	Zero-based index of the character to remove.

##### Note

If `index` is out of range, an error is printed to `stderr` and the string is left unchanged.

Definition at line 709 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), and [asm\\_length\(\)](#).

Referenced by [asm\\_strip\\_whitespace\(\)](#).

#### 4.5.3.26 `asm_shift_left()`

```
void asm_shift_left (
    char *const s,
    const size_t shift )
```

Shift a string left in-place by `shift` characters.

Removes the first `shift` characters from `s` by moving the remaining characters to the front. The resulting string is always null-terminated.

**Parameters**

<i>s</i>	<a href="#">String</a> to modify in-place. Must be null-terminated.
<i>shift</i>	Number of characters to remove from the front.

**Note**

If *shift* is 0, *s* is unchanged.

If *shift* is greater than or equal to the string length, *s* becomes the empty string.

Definition at line 738 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_length\(\)](#).

Referenced by [asm\\_get\\_token\\_and\\_cut\(\)](#), and [asm\\_trim\\_left\\_whitespace\(\)](#).

**4.5.3.27 asm\_str2double()**

```
double asm_str2double (
    const char *const s,
    const char **const end,
    const size_t base )
```

Convert a string to double in the given base with exponent support.

Parses an optional sign, then a sequence of base-N digits, optionally a fractional part separated by a '.' character, and optionally an exponent part indicated by 'e' or 'E' followed by an optional sign and decimal digits.

**Parameters**

<i>s</i>	<a href="#">String</a> to convert. Leading ASCII whitespace is skipped.
<i>end</i>	If non-NULL, <i>*end</i> is set to point to the first character not used in the conversion.
<i>base</i>	Numeric base in the range [2, 36].

**Returns**

The converted double value. Returns 0.0 on invalid base.

**Note**

Only digits '0'-'9', 'a'-'z', and 'A'-'Z' are recognized as base-N digits for the mantissa (the part before the exponent).

The exponent is always parsed in base 10 and represents the power of the specified base. For example, "1.5e2" in base 10 means  $1.5 \times 10^2 = 150$ , while "A.8e2" in base 16 means  $10.5 \times 16^2 = 2688$ .

The exponent can be positive or negative (e.g., "1e-3" = 0.001).

On invalid base, an error is printed to stderr, *\*end* (if non-NULL) is set to *s*, and 0.0 is returned.

**Examples:**

```
asm_str2double("1.5e2", NULL, 10)    // Returns 150.0
asm_str2double("-3.14e-1", NULL, 10) // Returns -0.314
asm_str2double("FF.0e1", NULL, 16)    // Returns 4080.0 (255 × 16^1)
```

Definition at line 812 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#), [asm\\_dprintERROR](#), [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), [asm\\_isspace\(\)](#), and [asm\\_str2int\(\)](#).

**4.5.3.28 asm\_str2float()**

```
float asm_str2float (
    const char *const s,
    const char **const end,
    const size_t base )
```

Convert a string to float in the given base with exponent support.

Identical to `asm_str2double` semantically, but returns a float and uses float arithmetic for the fractional part.

**Parameters**

<i>s</i>	<a href="#">String</a> to convert. Leading ASCII whitespace is skipped.
<i>end</i>	If non-NULL, <i>*end</i> is set to point to the first character not used in the conversion.
<i>base</i>	Numeric base in the range [2, 36].

**Returns**

The converted float value. Returns 0.0f on invalid base.

**Note**

Only digits '0'-'9', 'a'-'z', and 'A'-'Z' are recognized as base-N digits for the mantissa (the part before the exponent).

The exponent is always parsed in base 10 and represents the power of the specified base. For example, "1.5e2" in base 10 means  $1.5 \times 10^2 = 150$ , while "A.8e2" in base 16 means  $10.5 \times 16^2 = 2688$ .

The exponent can be positive or negative (e.g., "1e-3" = 0.001).

On invalid base, an error is printed to stderr, *\*end* (if non-NULL) is set to *s*, and 0.0f is returned.

**Examples:**

```
asm_str2float("1.5e2", NULL, 10)    // Returns 150.0f
asm_str2float("-3.14e-1", NULL, 10) // Returns -0.314f
asm_str2float("FF.0e1", NULL, 16)    // Returns 4080.0f (255 × 16^1)
```

Definition at line 899 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#), [asm\\_dprintERROR](#), [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), [asm\\_isspace\(\)](#), and [asm\\_str2int\(\)](#).

#### 4.5.3.29 `asm_str2int()`

```
int asm_str2int (
    const char *const s,
    const char **const end,
    const size_t base )
```

Convert a string to int in the given base.

Parses an optional sign and then a sequence of base-N digits.

##### Parameters

<code>s</code>	<code>String</code> to convert. Leading ASCII whitespace is skipped.
<code>end</code>	If non-NULL, <code>*end</code> is set to point to the first character not used in the conversion.
<code>base</code>	Numeric base in the range [2, 36].

##### Returns

The converted int value. Returns 0 on invalid base.

##### Note

Only digits '0'-'9', 'a'-'z', and 'A'-'Z' are recognized as base-N digits.

On invalid base, an error is printed to stderr, `*end` (if non-NULL) is set to `s`, and 0 is returned.

Definition at line 973 of file [Almog\\_String\\_Manipulation.h](#).

References `asm_check_char_belong_to_base()`, `asm_dprintERROR`, `asm_get_char_value_in_base()`, and `asm_isisspace()`.

Referenced by `asm_str2double()`, and `asm_str2float()`.

#### 4.5.3.30 `asm_str2size_t()`

```
size_t asm_str2size_t (
    const char *const s,
    const char **const end,
    const size_t base )
```

Convert a string to size\_t in the given base.

Parses an optional leading '+' sign, then a sequence of base-N digits. Negative numbers are rejected.

##### Parameters

<code>s</code>	<code>String</code> to convert. Leading ASCII whitespace is skipped.
<code>end</code>	If non-NULL, <code>*end</code> is set to point to the first character not used in the conversion.
<code>base</code>	Numeric base in the range [2, 36].

**Returns**

The converted size\_t value. Returns 0 on invalid base or if a negative sign is encountered.

**Note**

On invalid base or a negative sign, an error is printed to stderr, \*end (if non-NULL) is set to s, and 0 is returned.

Definition at line 1018 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_check\\_char\\_belong\\_to\\_base\(\)](#), [asm\\_dprintERROR](#), [asm\\_get\\_char\\_value\\_in\\_base\(\)](#), and [asm\\_isspace\(\)](#).

### 4.5.3.31 asm\_str\_in\_str()

```
int asm_str_in_str (
    const char *const src,
    const char *const word_to_search )
```

Count occurrences of a substring within a string.

Counts how many times word\_to\_search appears in src. Occurrences may overlap.

**Parameters**

<i>src</i>	The string to search in (must be null-terminated).
<i>word_to_search</i>	The substring to find (must be null-terminated and non-empty).

**Returns**

The number of (possibly overlapping) occurrences found.

**Note**

If word\_to\_search is the empty string, the behavior is not well-defined and should be avoided.

Definition at line 769 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_length\(\)](#), and [asm\\_strncmp\(\)](#).

### 4.5.3.32 asm\_str\_is whitespace()

```
bool asm_str_is whitespace (
    const char *const s )
```

Check whether a string contains only ASCII whitespace characters.

**Parameters**

<code>s</code>	Null-terminated string to test.
----------------	---------------------------------

**Returns**

true if every character in `s` satisfies [asm\\_isspace\(\)](#), or if `s` is the empty string; false otherwise.

Definition at line 1086 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isspace\(\)](#), and [asm\\_length\(\)](#).

#### 4.5.3.33 `asm_strip_whitespace()`

```
void asm_strip_whitespace (
    char *const s )
```

Remove all ASCII whitespace characters from a string in-place.

Scans `s` and deletes all characters for which [asm\\_isspace\(\)](#) is true, compacting the string and preserving the original order of non-whitespace characters.

**Parameters**

<code>s</code>	String to modify in-place. Must be null-terminated.
----------------	---

Definition at line 1065 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isspace\(\)](#), [asm\\_length\(\)](#), and [asm\\_remove\\_char\\_from\\_string\(\)](#).

#### 4.5.3.34 `asm_strncat()`

```
int asm_strncat (
    char *const s1,
    const char *const s2,
    const size_t N )
```

Append up to `N` characters from `s2` to the end of `s1`.

Appends characters from `s2` to the end of `s1` until either:

- `N` characters were appended, or
- a '\0' is encountered in `s2`.

After appending, this implementation writes a terminating '\0' to `s1`.

**Parameters**

<i>s1</i>	Destination string buffer (must be null-terminated).
<i>s2</i>	Source string buffer (must be null-terminated).
<i>N</i>	Maximum number of characters to append. If <i>N</i> == 0, the limit defaults to ASM_MAX_LEN.

**Returns**

The number of characters appended to *s1*.

**Warning**

This function uses ASM\_MAX\_LEN as an upper bound for the resulting length (excluding the terminating '\0'). The caller must ensure *s1* has capacity of at least ASM\_MAX\_LEN bytes.

Definition at line 1118 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), [asm\\_length\(\)](#), and [ASM\\_MAX\\_LEN](#).

**4.5.3.35 asm\_strncmp()**

```
int asm_strncmp (
    const char * s1,
    const char * s2,
    const size_t N )
```

Compare up to *N* characters for equality (boolean result).

Returns 1 if the first *N* characters of *s1* and *s2* are all equal; otherwise returns 0. Unlike the standard C strncmp, which returns 0 on equality and a non-zero value on inequality/order, this function returns a boolean-like result (1 == equal, 0 == different).

**Parameters**

<i>s1</i>	First string (may be shorter than <i>N</i> ).
<i>s2</i>	Second string (may be shorter than <i>N</i> ).
<i>N</i>	Number of characters to compare.

**Returns**

1 if equal for the first *N* characters, 0 otherwise.

**Note**

If either string ends before *N* characters and the other does not, the strings are considered different.

Definition at line 1160 of file [Almog\\_String\\_Manipulation.h](#).

Referenced by [asm\\_str\\_in\\_str\(\)](#).

#### 4.5.3.36 `asm_strncpy()`

```
int asm_strncpy (
    char *const s1,
    const char *const s2,
    const size_t N )
```

Copy up to N characters from s2 into s1 (non-standard).

Copies n = min(N, len(s2)) characters from s2 into s1 and then writes a terminating '\0'.

##### Parameters

<i>s1</i>	Destination string buffer (must be null-terminated).
<i>s2</i>	Source string buffer (must be null-terminated).
<i>N</i>	Maximum number of characters to copy from s2.

##### Returns

The number of characters copied (i.e., (n)). Returns 0 and prints an error if (n > \text{len}(s1)).

##### Warning

This function does not check the capacity of s1. Instead, it checks the *current length* of the string in s1 and refuses to copy more than that. This differs from the standard strncpy().

Definition at line 1192 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_dprintERROR](#), and [asm\\_length\(\)](#).

#### 4.5.3.37 `asm_tolower()`

```
void asm_tolower (
    char *const s )
```

Convert all ASCII letters in a string to lowercase in-place.

##### Parameters

<i>s</i>	String to modify in-place. Must be null-terminated.
----------	---

Definition at line 1220 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isupper\(\)](#), and [asm\\_length\(\)](#).

### 4.5.3.38 asm\_toupper()

```
void asm_toupper (
    char *const s )
```

Convert all ASCII letters in a string to uppercase in-place.

#### Parameters

<code>s</code>	String to modify in-place. Must be null-terminated.
----------------	---

Definition at line 1235 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_islower\(\)](#), and [asm\\_length\(\)](#).

### 4.5.3.39 asm\_trim\_left\_whitespace()

```
void asm_trim_left_whitespace (
    char *const s )
```

Remove leading ASCII whitespace from a string in-place.

Finds the first character in `s` for which [asm\\_isspace\(\)](#) is false and left-shifts the string so that character becomes the first character.

#### Parameters

<code>s</code>	String to modify in-place. Must be null-terminated.
----------------	---

Definition at line 1253 of file [Almog\\_String\\_Manipulation.h](#).

References [asm\\_isspace\(\)](#), [asm\\_length\(\)](#), and [asm\\_shift\\_left\(\)](#).

### 4.9.1 Macro Definition Documentation

#### 4.9.1.1 ALMOG\_LEXER\_IMPLEMENTATION

```
#define ALMOG_LEXER_IMPLEMENTATION
```

Definition at line 16 of file [tests.c](#).

#### 4.9.1.2 ALMOG\_STRING\_MANIPULATION\_IMPLEMENTATION

```
#define ALMOG_STRING_MANIPULATION_IMPLEMENTATION
```

Written by AI

[test\\_almog\\_lexer.c](#) Simple, self-contained tests for [Almog\\_Lexer.h](#) (single-header).

Definition at line 15 of file [tests.c](#).

## 4.9.2 Function Documentation

### 4.9.2.1 expect\_tok()

```
static void expect_tok (
    const char * test_name,
    struct Lexer * l,
    enum Token_Kind exp_kind,
    const char * exp_text,
    size_t exp_line,
    size_t exp_col ) [static]
```

Definition at line 123 of file [tests.c](#).

References [al\\_lexer\\_next\\_token\(\)](#), [Location::col](#), [fail\\_token\(\)](#), [Token::kind](#), [Location::line\\_num](#), [Token::location](#), [Token::text](#), and [Token::text\\_len](#).

Referenced by [test\\_basic\\_program\(\)](#), [test\\_comments\(\)](#), [test\\_hash\\_not\\_pp\\_directive\\_when\\_not\\_column1\(\)](#), [test\\_hex\\_float\\_variants\(\)](#), [test\\_invalid\\_single\\_char\(\)](#), [test\\_keyword\\_vs\\_identifier\\_prefix\(\)](#), [test\\_literal\\_operators\\_longest\\_match\(\)](#), [test\\_number\\_stops\\_on\\_invalid\\_digit\\_in\\_base\(\)](#), [test\\_numbers\\_valid\\_and\\_invalid\(\)](#), [test\\_pp\\_directive\\_and\\_locations\(\)](#), [test\\_string\\_and\\_char\\_literals\(\)](#), [test\\_unterminated\\_block\\_comment\(\)](#), and [test\\_whitespace\\_location\\_math\(\)](#).

### 4.9.2.2 fail\_token()

```
static void fail_token (
    const char * test_name,
    struct Token got,
    enum Token_Kind exp_kind,
    const char * exp_text,
    size_t exp_line,
    size_t exp_col ) [static]
```

Definition at line 94 of file [tests.c](#).

References [Location::col](#), [Token::kind](#), [kind\\_name\(\)](#), [Location::line\\_num](#), [Token::location](#), [Token::text](#), and [Token::text\\_len](#).

Referenced by [expect\\_tok\(\)](#).

#### 4.9.2.3 kind\_name()

```
static const char* kind_name (
    enum Token_Kind k ) [static]
```

Definition at line 19 of file [tests.c](#).

References [TOKEN\\_ANDAND](#), [TOKEN\\_ANDEQ](#), [TOKEN\\_ARROW](#), [TOKEN\\_BANG](#), [TOKEN\\_BITAND](#), [TOKEN\\_BITOR](#), [TOKEN\\_BSLASH](#), [TOKEN\\_CARET](#), [TOKEN\\_CHAR\\_LIT](#), [TOKEN\\_COLON](#), [TOKEN\\_COMMA](#), [TOKEN\\_COMMENT](#), [TOKEN\\_DOT](#), [TOKEN\\_ELLIPSIS](#), [TOKEN\\_EOF](#), [TOKEN\\_EQ](#), [TOKEN\\_EQEQ](#), [TOKEN\\_GE](#), [TOKEN\\_GT](#), [TOKEN\\_HASH](#), [TOKEN\\_IDENTIFIER](#), [TOKEN\\_INVALID](#), [TOKEN\\_KEYWORD](#), [TOKEN\\_LBRACE](#), [TOKEN\\_LBRACKET](#), [TOKEN\\_LE](#), [TOKEN\\_LPAREN](#), [TOKEN\\_LSHIFT](#), [TOKEN\\_LSHIFTEQ](#), [TOKEN\\_LT](#), [TOKEN\\_MINUS](#), [TOKEN\\_MINUSSEQ](#), [TOKEN\\_MINUSMINUS](#), [TOKEN\\_NE](#), [TOKEN\\_OREQ](#), [TOKEN\\_OROR](#), [TOKEN\\_PERCENT](#), [TOKEN\\_PERCENTEQ](#), [TOKEN\\_PLUS](#), [TOKEN\\_PLUSEQ](#), [TOKEN\\_PLUSPLUS](#), [TOKEN\\_PP\\_DIRECTIVE](#), [TOKEN\\_QUESTION](#), [TOKEN\\_RBRACE](#), [TOKEN\\_RBRACKET](#), [TOKEN\\_RPAREN](#), [TOKEN\\_RSHIFT](#), [TOKEN\\_RSHIFTEQ](#), [TOKEN\\_SEMICOLON](#), [TOKEN\\_SLASH](#), [TOKEN\\_SLASHEQ](#), [TOKEN\\_STAR](#), [TOKEN\\_STAREQ](#), [TOKEN\\_STRING\\_LIT](#), [TOKEN\\_TILDE](#), and [TOKEN\\_XOREQ](#).

Referenced by [fail\\_token\(\)](#).

#### 4.9.2.4 main()

```
int main (
    void )
```

Definition at line 507 of file [tests.c](#).

References [test\\_basic\\_program\(\)](#), [test\\_comments\(\)](#), [test\\_hash\\_not\\_pp\\_directive\\_when\\_not\\_column1\(\)](#), [test\\_helpers\\_direct\(\)](#), [test\\_hex\\_float\\_variants\(\)](#), [test\\_invalid\\_single\\_char\(\)](#), [test\\_keyword\\_vs\\_identifier\\_prefix\(\)](#), [test\\_literal\\_operators\\_longest\\_match\(\)](#), [test\\_number\\_stops\\_on\\_invalid\\_digit\\_in\\_base\(\)](#), [test\\_numbers\\_valid\\_and\\_invalid\(\)](#), [test\\_pp\\_directive\\_and\\_locations\(\)](#), [test\\_string\\_and\\_char\\_literals\(\)](#), [test\\_unterminated\\_block\\_comment\(\)](#), and [test\\_whitespace\\_location\\_math\(\)](#).

#### 4.9.2.5 test\_basic\_program()

```
static void test_basic_program (
    void ) [static]
